

APEX PULP

Manufacturer of Moulded Pulps

SEEDLING TRAY 10 CAVITY

Eco-Friendly Pulp

Made from
BIODEGRADABLE
Kraft Agricultural Pulps

The Seedling Tray with 10 Cavities is made from eco-friendly biodegradable kraft material, intended for use as tray for germinating seeds up to vegetative stage. It is designed to help young roots absorb nutrients from the soil until the roots are strong enough to penetrate through the moulded pulps.

To transfer young and growing seedlings to larger pot, simply cut out each individual tray and transfer it to larger pot, resulting in almost 100% transfer yield.

Suitable for

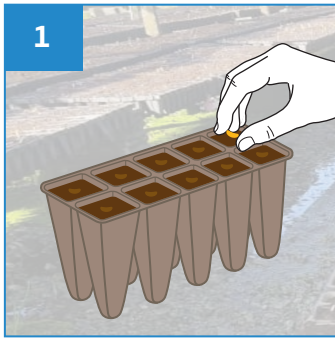

Farmer / Gardener

GreenHouse Nursery

User Guide

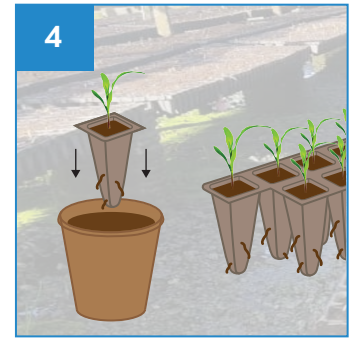

1 Fill each cavity with your mix of soil. Plant a seed into the soil for each cavity.

2 Arrange the filled trays at nursery with optimum condition for germinating.

3 Once the roots start to penetrate through the pulp, consider transferring the young seedlings to pots.

4 Separating each cavity by cutting the pulp. Transfer to larger pot directly with the pulp.
